# Sample Report

# End to End Ownership – Benefits

## Definition

End to end ownership refers to owning of different stages of product lifecycle from Requirements elaboration to post production support of a given application, product or product suite

\* Product Vision and Feature definition continue to be owned by Cision

## BENEFITS

Single owner for end to end management of project lifecycle and accountability to the outcomes across connected platforms

End to end ownership of process, people, platforms will help reduce overall cost

- Higher adaptability and adoption of process standardization
- Reduction of duplication / repetition of work (if any)
- Leveraging of Accion COEs for larger support system

Allows Cision to focus and redirect FTEs on strategic, high value initiatives while regular operations are taken care by the end-to-end owner

- Enhanced benefits of SLA driven execution, process standardization and accountability.
- Enhanced sense of predictability and control of processes- due to single owner

# End to End Ownership – Approach

- Accion reviewed various applications/products where Accion is :
  - largely engaged in
  - having strong capabilities in,
  - deep dived into the ownership spread of various lifecycle activities
- Performed analysis to identify the gaps in activities and roles across product lifecycle for Accion to take up end to end ownership of execution and support of these applications/products
- Listed out the applications in terms of ownership and readiness

# End to End Ownership - Stages

## Self appraisal Phase

Identify activities and Roles that Accion is not directly or indirectly owning in each application

## Due Diligence Phase

Develop detailed view of roles and responsibilities of each role / person

Develop Transition plan for each role with a timeline

Ramp up the team aligned to the plans

Sign off the SOW/ Contract

## Ownership Plan definition and Preparation Phase

Identify the members to take transition and align them with the expectations .

## Ownership Plan Implementation Phase

Ownership Plan of activities to be initiated and completed as per plan.

Monitor and govern the effectiveness of the transition phase (KPIs, report, playback sessions)

\* Can vary in duration based on factors (geo location, type of role, etc) influencing the transition activities

## Ownership Phase

Phase1 :Run with joint ownership

Phase 2 :Run with independent ownership

# End to End Ownership – Product Knowledge/ Skills

- Describe Tenets of End 2 End Ownership

- Showcase the projects with these tenets in place

<<< Can be manifested by a heatmap for the set of projects represented in rows (refer gap analysis) >>>

- Show the scale of capabilities

- Depth of subject matter knowledge
  - Breadth and depth of tech skills
  - Knowledge documentation

<<< Can be manifested by a heatmap at each application level with each row representing the modules of the application and the columns showing the tenets/ functions the team performs. These slides can be put into appendix slide >>>

- There are Cision roles in the activities like DEV, QA, PROD Deployment and Application Support on which Accion has no dependencies and those roles can be taken up by Accion (22-Mar-2023)

- Look at the applications that are really good candidates for end 2 end

- Standard set of technical skill
  - Should be run of the mill kind and not those that are high visibility / strategic importance for Cision

- Show successes where we have achieved end 2 end / are close to them <<<Detailed Scorecard Slides to be created for below>>>

- Gorkana
  - Multivu
  - OMC
  - Media Rooms
  - Cision France (PO / Product Managers are non-Cision)

- Show HeatMap of ownership of functions for the above projects and say this would be the model to extend this to other projects

- Identify the functions which we don't have in our fold and could pick up
  - Show a plan phase wise for the ones that we want to take up

# End to End Ownership - Capability Heatmap (Current State)

# End to End Ownership - Savings

- We have a model in place which we can use to jointly update based on finalized roles and current cost to be able to derive overall savings
- Anticipated savings:
  - Around ~40-60% savings on a monthly/annualized basis after completion of the exercise

*PI note: this will vary depending on the number of roles and timing of taking up ownership*

# End to End Ownership - Next Steps

- Review and Validate detailed application level gap analysis with Cision leaders
  - Prioritize applications for taking up end to end ownership
  - KRAs / KPIs for measure of success
  - Develop plan for shifting from current state to end to end ownership state (Activities, Schedule, Resources, SMEs)
  - Execution of the plan
  - Cutover to Accion end to end ownership
- 
- Single Point of Contact from Cision for each portfolio of applications

# End to End Ownership – Confidence Indicators

- Why Accion would be suitable for end-to-end ownership
  - Case Studies (examples of how we have reduced cost of ownership/ delivery-Ops)
  - EDC++ model
  - COEs for larger support
  - *Resource Pool availability*
- What we need from Cision as support for making the initiative a success
